LXR DETAILS

 **PITSTERPRO**

Inspired by the modern day 250F and 450F movement in motorcycle technology; the LXR is the closest thing to a mini Full-size motocross bike. One of the key features is a full motocross linkage system that uses properly measured components to maximize the progression ratio as the suspension moves. This system is called the "Pitster Progressive Link" and with 9.8" of rear wheel travel the new DNM dual high and low speed compression adjustable shock riders can fine tune the suspension. Adjustable rebound, preload and optional pull rods, allow for a personal touch to your bike.

Available in three wheel and wheelbase combos: 17/14, 14/12, and 12/10. The LXR is sure to meet the demands of any race class and any terrain.
